

Getting Started with Al Sketchbook

Introduction

Al sketchbook tool allows fashion designers to leverage Al technology to inspire creativity, streamline the workflow, and seamlessly transition from concept to virtual twin. The tool uses images of an existing garment (3D block renders, photographs, or a 2D sketch) through an intuitive interface, assisting designers in generating new concepts.

Accessing the Al Sketchbook Space

There are two ways to access the AI Sketchbook Space

01

While viewing a style render image, click the 'Al Sketchbook' icon. This opens the ideation space and loads the current style as a reference image.

02

In the Stylezone main page, click 'Al Sketchbook' from the left navigation panel or access from the style page.

Early Adopters User Guide

Best Practices & Limitations

Follow these recommendations to ensure the most accurate and visually consistent results when uploading or creating design images:

01	Use Simple, Clear Poses	 Select reference images with arms down. Avoid complex poses that cover or distort parts of the garment. The clearer the garment in the image, the better the output.
02	Upload One Image at a Time	 Use a single view per image. Do not combine multiple views (e.g., front and side views). Combined images may confuse the system.
03	Preserve the Original Silhouette	 At this stage, silhouette modifications (e.g., adding pockets or altering garment shapes) are not supported. The system will maintain the garment's original outline and style.
04	Avoid Visual Obstructions	 Keep hands, accessories, props, and text away from the garment. Use clean, centered images for optimal results.
05	Let the Al Identify the Garment	 The model automatically detects garment types (e.g., shirt, skirt, jacket). Make sure the garment type is visually clear in the image.
06	For Black & White Outputs	 Use black & white input images if you want a monochrome result. At this stage, the model will not remove existing colors from color images.

Viewing AI-Generated Ideas

The center panel of the ideation space shows AI-generated garments, and you can choose which ones to include in your new style.

01

Click 'Add Variation' to create more ideas.

02

Use 'View Settings' to reload your previous inputs.

03

Select the images you want to include in your style.
